The Illinois State University Grounds works closely with the facility at the Ewing Culture Center to maintain the urban forest for many opportunities for the community and learning opportunities in horticulture. The link above shows the various opportunities for management of the forest.

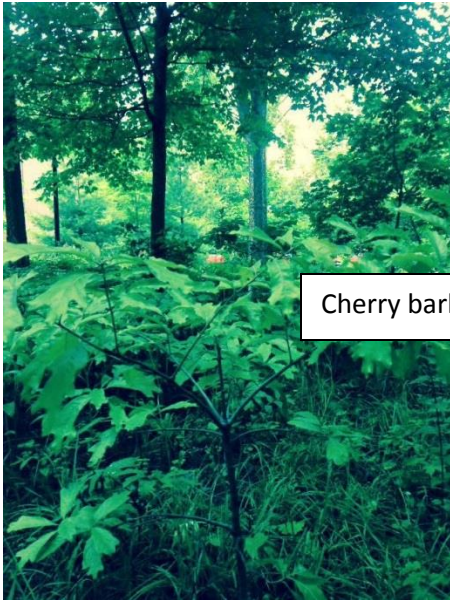

This area is covered in a groundcover of Solomon's seal, daylily, May apple, bluebells and other natives, removing select trees allowed light to provide opportunity for new growth of understory as well as replanting of new native trees for future canopy cover.

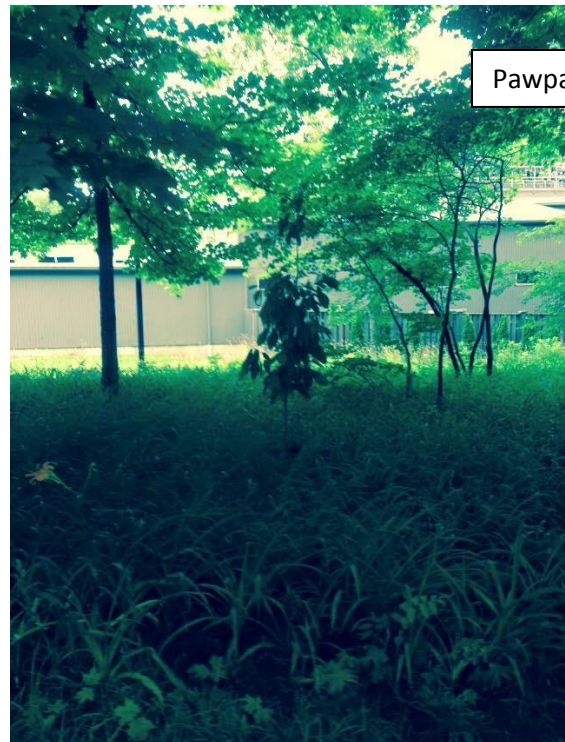

Shagbark Hickory

Cherry bark Oak

Pawpaw

Kentucky coffee tree
